 Nonthaburi - 11140 - Thailand

PROFILE

A fourth-year Computer Science student at Sripatum University with an interest in software development and technology. Throughout my studies, I have gained knowledge in programming, web development, database management, and AI, applying these skills through various course and personal projects.

EDUCATION

● Sripatum University | 2023 - Present

Bachelor of Science (B.Sc.)
Computer Science and Software
Development Innovation
CGPA : 4.00

● Kasintorn Saint Peter School | 2017 - 2023

Intensive English Program
Sciences and Mathematics Program

TECHNICAL SKILLS

● Programming

- C# - SQL - HTML
- Python - React (JS) - CSS
- Javascript - Node.JS

● Tools

- Git & Github - MongoDB
- Github Desktop - Supabase
- VisualStudioCode - Docker
- Postman - n8n
- MySQL - Microsoft office

● AI Tools

- ChatGPT - Claude
- Gemini - Github Copilot

SOFT SKILLS

- Team Collaboration
- Problem Solving
- Adaptability & Continuous Learning

LANGUAGE

- Thai (Native)
- English (Intermediate)

PROJECTS & EXPERIENCES

BakeQuery | E-commerce Bakery Platform

April 2026

ASP.NET | Core MVC | C# | MySQL | Entity Framework Core | JWT Authentication

- Built a full-stack e-commerce platform for a bakery business, covering product browsing, cart, promotions, and order tracking for customers, with a role-based admin dashboard for staff.
- Implemented JWT-based authentication with three separated user roles (admin, staff, customer) for secure, permission-based access.
- Designed the order pipeline from promo-code discounts through to payment confirmation via uploaded proof-of-payment images.
- Structured the MySQL database schema using Entity Framework Core to support products, orders, and promotions efficiently.

Welly AI | RAG-based Nutrition Assistant

March 2026

Python | FastAPI | LangChain | FAISS | HuggingFace Embeddings | React + Vite

- Built an AI chatbot that answers food and nutrition questions (calories, sugar, health risks) using real data retrieved from a structured knowledge base instead of the LLM's general knowledge.
- Converted food, BMI, and DGA datasets into vector embeddings with HuggingFace models, stored in FAISS for fast semantic search.
- Connected retrieval to an LLM via LangChain and served it through a FastAPI backend and React chat interface, letting users ask questions in natural language and get data-grounded answers for meal planning.

BoardCell | Board Game Café Management System

December 2025

React | Vite | Express.js | Supabase/PostgreSQL | JWT Authentication

- Developed a table reservation and ordering system for a board game café, letting customers browse the game catalog, book tables by date and time, and track order status in real time.
- Handled payment verification through uploaded slip images, paired with a promotion engine for calculating discounts on bookings and orders.
- Added a statistics dashboard giving managers visibility into bookings, revenue, and table usage without needing to query the database directly.
- Split the app into a React/Vite frontend and an Express.js/Node.js backend, connecting to Supabase (PostgreSQL) with role-based permissions for customers, staff, and managers.
- Hardened the API layer with CORS, Helmet, and rate limiting to guard against common web vulnerabilities.

Earthquake Alert | Discord Earthquake Alert Bot

December 2025

Javascript | n8n | Discord API | <https://earthquake.usgs.gov> (API) | Webhooks

- Built two automated workflows in n8n that monitor real-time earthquake data from the USGS API and post formatted alerts to a Discord channel via webhook.
- Designed a scheduled workflow that checks for new earthquakes every 30 minutes, filtering by significance before formatting the data into a Discord embed with location, magnitude, depth, and tsunami risk.
